

TRITECH CIVIL ENVIRONMENTAL, PC

ALTA, Boundary, Easement, & Floodplain Surveys

Planning, Engineering, & Surveying

Tritech has been providing ongoing land surveying services to the Piedmont Triad Regional Water Authority (PTRWA) at sites in Guilford and Randolph Counties for seven years. These efforts represent more than 75 projects involving property and easement acquisition; right-of-way and route location; floodplain, flood pool, and wetlands delineation; dam monument monitoring; structure location; and construction staking for bridges and roads. All of this effort has been completed in conjunction with the planning, design, and construction of Randleman Lake and associated facilities. Much of the surveying work involves boundary surveys necessary to acquire property from or exchange property with individual property owners within the reservoir limits, in constructed wetlands, or along relocated roads. Some of the projects involve topographic surveys and volumetric computations. In addition to the various land surveying efforts, Tritech completed all of the engineering surveys necessary to design the finished water distribution, storage, and pumping facilities required to eventually deliver water to the entities that make up the membership of the PTRWA.
